

Crystal Reports® Version 11 Supported

From Eastop ERP System Version 12 onwards, Crystal Reports® version 11 will be used as the reporting engine supporting Unicode report printing. With Unicode support, user can input any characters inside EOA System on a Unicode supported operating system like Windows® 2000 or XP.

Unicode Support and Backward Compatibility

Crystal Reports® version 11 supports Unicode printing. (Please refer to the Eastop ERP System Unicode version part). Most of the existing reports can be used without any further action when printing data without non-english Unicode data. For report that needs to be printed with non-english Unicode data, you are required to modify the reports using Crystal Reports® Version 11 and change the font used in the fields to a Unicode fonts, e.g. Arial Unicode MS.

Print Picture by Path

With Crystal Reports® version 11, you can specify the image to be printed by a file path and print the images instead of embedded the images in the reports or the database file.

With this feature, you can insert image path in any fields of the report, e.g. inserting other pictures in Quotation.

Export to Microsoft® Excel with more tidy format

Export to Microsoft® Excel from Crystal Reports® version 11 has more options for you to control in order to obtain a tidier format.
