

## Built-in FastReport® 3

Eastop ERP System V12 has adopted the latest FastReport® 3. Eastop users could employ FastReport® 3 themselves to design reports free of charge. FastReport® 3 allows Eastop ERP System generates reports quickly and efficiently. The Designer 3.2X offers a more user-friendly interface for report design. More importantly, FastReport® 3

supports Unicode reports printing. (Please refer to the Eastop ERP System Unicode Version for details)

The script feature of FastReport® 3 supports one script in the report, just like a unit in the Delphi. It dramatically increases performance and supports new events for fast report objects. Standard Pascal features are included in the designer: variables, constants, procedures, functions (nested allowed) with var/const/default parameters, all standard operators and statements (including case, try/finally/except, with), types (int, float, bool, char, string, multi-dimensional array, enum, variant), classes (with methods, events, properties, index and default properties).

However, reports designed by previous Fast Report Designer versions are not printable in Eastop ERP System V12. These reports should be upgraded to new FastReport® 3 version. Please notify your consultant if you have designed any reports by previous versions of Fast Report Designer.
